Regarding Claims 1-4,10,11,13 and 16-19, Black et al. show an a RF array of antenna elements A-D,K that may be divided into subarrays comprising at least a driven element K and parasitic elements controlled by a variable reactance load comprising the diode 13, choke (inductance), capacitance 16 and resistance 15 and controlled by the bias voltage to the diodes via the controller 10 defining a digital beamformer, all arranged as claimed.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5-9,12,14,15,20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Black et al. (3725938) in view of Pickles et al. (3790943).

The use of a phased array with the system of Black et al. as the basic building block thereof, would have been obvious to the skilled artisan to implement in order to provide a stacked arrangement of driven antennas. Such a system is illustrated by Pickles et al. where the central, stacked and phased array within the housing 156 is properly fed with currents providing a particular frequency and gain over a single monopole. It would have been obvious to employ such a dipole array in lieu of the monopole of Black et al. for providing a particular beam pattern, radiation angle (since a dipole is different than a monopole's angle of radiation) and scanned array.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claims 1,3 and 5, for example, there is confusion with the alternative language "antenna elements or sub-arrays" because each group is not the same as the other. For example, antenna elements are not necessarily the same as a sub-array. One group works with, say a particular antenna, and the other requires additional structure or a relationship with some other antenna structure not positively recited and interrelated. The claims should also make it clear that a sub-array is part of an array with a particular structure.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4,10,11,13 and 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Black et al. (3725938).
